Dear Tourist:

Welcome to San Gerardo de Dota, at Savegre Valley, situated 89 Kilometers south west from San José, the capital of Costa Rica, in the Talamanca mountain range. This place has an elevation of 2200 meters (7200 FT.) The estimated population is 130 inhabitants.

It was discovered in 1952 by Efraín Chacón and his brother Federico during a hunting trip.

The following is a checklist of birds that are migratory and residential in the region. It was put together by Marino Chacón, a local bird watcher, who came to live with his family 30 years ago.

Realizing that there are many common, easily observable species, as well as several elusive, difficult to observe species we have worked out a point system specie by specie. We hope it will be interesting and useful for you when you are in the field, bird watching.

Key to status Abbreviations

- (C) Common
- (U) Uncommon
- (R) Rare
- (M) Migrant
- (LAM) Local Altitudinal Migrant
- (RE) Resident
- (A) Accidental
